Dear Hiring Manager,

I am excited to apply for the Software Engineer position at Klarna, as I am passionate about building scalable systems with exceptional user experiences. With over 3 years of backend development experience in Java, Python, and Node.js, I am confident in my ability to contribute effectively to your global engineering teams.

During my time as a Lecturer at Generic University and a Research Associate at Tech Research Center, I honed my problem-solving skills and gained experience working in Agile environments. My educational background, including a Bachelor's degree in Business and a Visiting Postgrad in Computer Science from Stanford University, has equipped me with the technical knowledge necessary to excel in this role.

I am proficient in cloud environments such as AWS, and I have a keen eye for maintaining code quality through testing and code reviews. My track record includes winning the XYZ Hackathon 2022 and receiving the PMP and AWS certifications.

I am excited about the opportunity to collaborate with your product managers and designers to build smooth user experiences, and I am confident in my ability to monitor services and address production issues effectively. Thank you for considering my application.

Warm regards,

Danny Morgan
